

**LISTING OF CLAIMS**

1-19. (Canceled)

20. (Previously Presented) A method for providing information to users via communications devices associated with said users, said method comprising the steps of:  
receiving a digits request trigger from a communication device, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a communications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated with said dialed digits or feature code;  
identifying a user associated with said digits request trigger;  
correlating said digits request trigger with specific information requests for said user;  
and  
retrieving said specific information  
sending said retrieved information to said communication device for display to said user.

Claim 21. (Canceled)

22. (Previously Presented) A system for providing information to a wireless network subscriber in response to a digits request trigger or a SMS origination message, comprising:

means for receiving said digits request trigger from said wireless network, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a telecommunications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated said dialed digits or feature code;

means for correlating said digits request trigger to requested data, wherein said correlating means accesses a user profile database to identify said requested information for a particular digits request trigger;

means for retrieving data corresponding to said digits request trigger; and

means for sending said retrieved data to a user who initiated said digits request trigger.

Claims 23 - 25. (Canceled)

26. (Previously Presented) An information system for a wireless network comprising:

a wireless web information services gateway coupled to said wireless network and capable of receiving digits request triggers from said wireless network, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a telecommunications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated said dialed digits or feature code;

means for correlating digits request triggers to requested information, wherein said correlating means accesses a user profile database to identify said requested information for particular digits request trigger;

means for retrieving said requested information; and

means for sending said requested information to subscribers on said wireless network.
